

MANOJ ADHIKARI

Data Analyst | +1 (510) 334-8292 | manojadk849@gmail.com

 LinkedIn |  GitHub | manojadhikary.com.np | El Sobrante, California (CA)

PROFESSIONAL SUMMARY

Data Analyst with 3+ years of advanced analytics and business intelligence experience in **Insurance, E-commerce, and EdTech domain** with expertise in **Python, SQL and BI tools**. Specializes in building **robust data pipelines, uncovering patterns**, conducting **statistical analysis**, and developing **predictive models** to support data-driven decision-making. Actively seeking opportunities to grow in **fast-paced, dynamic, initiative-driven** teams where data is at the core of strategic impact.

EDUCATION

- **Master's, Computer Science (GPA: 4.0)** | *East Tennessee State University* *Aug 2023- May 2025 | TN, USA*
- **Bachelor's, Computer Science (GPA: 3.68)** | *Tribhuvan University* *Aug 2016 – May 2020 | Nepal*

TECHNICAL SKILLS

Programming:	Python, SQL, R
Database:	SQL (MySQL, PostgreSQL), NoSQL (MongoDB, Elasticsearch), Amazon Redshift
BI tools & Visualization	PowerBI, Tableau, Amazon QuickSight, Looker, Sigma Excel, Streamlit, Matplotlib
Cloud & Tools	GCP, AWS SageMaker, AWS Lambda, Azure AI Studio, Snowflake, Apache Airflow, PySpark, Git, Docker, CI/CD (GitHub Actions), Microsoft Office Package
AI/ML & NLP	GenAI, LLMs, Tensorflow, PyTorch, Scikit-learn, CNN, Transformers, RAG, NLTK, Traditional ML Classifiers, NLTK, SpaCy, OpenCV, Keras, Pandas, Numpy
Soft Skills:	Leadership, Stakeholder Engagement, Collaboration, Problem-Solving

PROFESSIONAL EXPERIENCE

Graduate Research Assistant (During Master's), *East Tennessee State University* *Sep 2023 – April 2025 | Tennessee*

- Conduct in depth analysis of over **12,000** user queries from University QnA platform using **Python and Tableau** to identify recurring pain points across campus infrastructure, IT services, and learning environments.
- Build **incremental** and **interactive** dashboard and reports to communicate insights with university administration.
- Collaborate with the facilities and IT team to prioritize and implement infrastructure changes, reducing query volume by **35%** over two semesters and improving satisfaction ratings by **18%** on post-service surveys.
- Develop an NLP-based emotion analysis pipeline for student course feedback to segment and monitor sentiment trajectories of student over a period of time. Create sentiment KPI dashboard for professors using **PowerBI**.

Data Analyst-II (Insurance), *Renegade Insurance*

Feb 2022 - July 2023 | Oregon

- Develop ETL pipelines to integrate **16+** insurance companies heterogeneous data sources into Renegade data warehouse **ensuring high data integrity** for real-time analytics and reporting.
- Carry in-depth analysis, and pattern mining on historical data to identify trends in claims, premiums, and customer behavior over time.
- Perform user geo-location traffic analysis and develop targeted group marketing campaigns, boosting leads by **21%**.
- Analyze and define key performance indicators (KPIs) such as **policy uptake, retention rates, claims ratios, sales and customer lifetime that impacts on business success**.
Develop dashboard and reports to track KPIs **PowerBI** to assess product success.
- Conduct **A/B tests** for newly released product features, **highlight problem statement**, provide **predictive insights** to improve engagement and product performance and document reports.
- Innovate data solutions in collaboration with data scientists and data engineers to deliver ad-hoc analytics for vendor to enhance operational efficiency and business scalability.

- Forecast short and long-term demand at SKU, category, and regional levels using time-series models (**ARIMA**).
- Develop pipeline for data extraction, transformation, validation, data integrity and quality checks, versioning and warehousing data documents in NoSQL (MongoDB) using python.
- Analyze email, search, display, and social media campaign data to provide actionable insights for improving targeting and personalization. Document analysis and communicate with vendors and stakeholders.
- Conduct customer segmentation analysis using **RFM (Recency, Frequency, Monetary)** modeling to identify high-value customers and tailor marketing strategies, resulting in improved retention and targeted campaign.
- Implement clustering (**K-Means**) to cluster customer, association rule mining (**Apriori**) for market basket analysis, and classification models (**Random Forest, XGBoost**) to classify product performance/
- Worked directly with clients and vendors to identify analytics requirements, document and communicate performance metrics with actionable insights with non-technical stakeholders.

PROJECTS

- **Student Monitoring and Analytical Report Tool (SMART):** NLP-powered application to classify student emotions on course feedback, and monitor mental health, financial need, stress trend etc. from care report data. *Tools: Python Pandas, SQL, Matplotlib, Tensorflow, DistilBERT, Streamlit, NLTK*
- **Supply Chain Analytics:** Using a real-world dataset, the project aims to identify and address key challenges in shipment and inventory management. It analyzes supply chain inefficiencies and delivers interactive dashboards to inform stakeholders and recommend structural improvements. *Tools: Python, Pandas, Numpy, PowerBI*
- **Sentiment360 - Customer Sentiment & Product Insights:** An interactive NLP dashboard that analyzed 50K+ Amazon product reviews. Performed sentiment classification and LDA-based topic modeling for diagnostic analysis. Identified key pain points across product lines, helping product quality improvements. *Tools: Python, Pandas, NLP, Streamlit, BERT, PowerBI*
- **Preppify – Interactive Data Cleaning & Transformation Platform:** Data preprocessing and visualization tool to streamline dataset preparation for data analysts and data scientists. Enabled users to upload CSV files and perform interactive cleaning tasks such as missing values, encoding categorical variables, data type conversion, column-level transformations, and visualization of features and target variables. *Tools: Python, React, FastAPI, Pandas, Numpy*
